A common, but slightly harder transformation is ROT13.

KC7cyber would become XP0pl0re

Try it yourself with this string: `Gwc axqv um zqopb zwcvl jijg.`

You spin me right round baby

Go to [dcode.fr/pigpen-cipher](https://www.dcode.fr/pigpen-cipher)

There should be an option to upload or draw the symbols

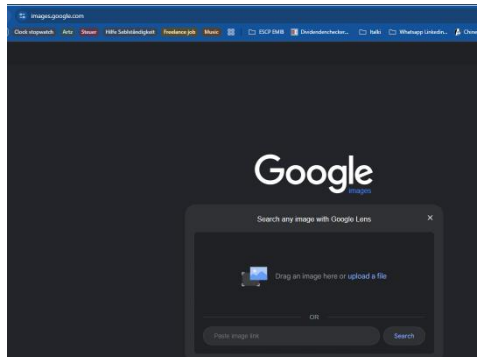

Input each symbol manually using their visual cipher tool

It will decode it for you accurately
