

Whiskermania: An Intro to Network Concepts

Your badge says "IT Administrator." Your stomach says "I have made a terrible mistake."

You step through the front door of Whiskers & Wonders Cat Sanctuary and immediately have to sidestep a kitten. Then another. Someone rushes past with a carrier, a phone is ringing somewhere, and a cat is yowling from the back room.

Morgan Chen, the Operations Manager, spots you from across the lobby. They're holding a clipboard, a coffee cup, and somehow also a cat. "Oh thank god. You're the new IT person? Jamie's replacement?"

You nod. Confidently. You definitely know what you're doing.

Morgan doesn't look entirely convinced, but they're too busy to dig deeper. "Great. I'll get you oriented once I deal with this—" The cat in their arms makes a break for it. Morgan catches it. "Kitten season," they explain, as if that covers everything.

Section 1: Welcome to the Chaos

```
search *  
| distinct $table
```

Common tables you'd typically see returned:

AuthenticationEvents Email ProcessEvents FileCreationEvents OutboundNetworkEvents DNSEvents
NetworkEvents SecurityEvents DeviceNetworkEvents DeviceProcessEvents DeviceFileEvents
DeviceLogonEvents Syslog CommonSecurityLog AzureActivity SigninLogs

```
search "185.174.137.42"
```

```
search in (AuthenticationEvents, ProcessEvents, DNSEvents) "185.174.137.42"
```

```
search "185.174.137.42"
```

```
| where timestamp > ago(7d)
```

```
search "185.174.137.*"
```

```
search "185.174.137.42"
```

```
| distinct $table
```

```
.show tables
```

```
.show tables
```

```
| where TableName contains "DNS"
```

```
.show table DNSEvents schema
```

```
union withsource=TableName *
```

```
| distinct TableName
```

```

```

HTTP status codes tell you what happened with a request:

- **200** - OK, success
- **301/302** - Redirect
- **403** - Forbidden
- **404** - Not Found
- **500** - Server Error
