Tools:

[Google Maps](#)[Google Image search](#)[Sherlock](#)

Investigate an insider threat by analyzing GitHub repositories for exposed credentials, using OSINT tools to correlate online accounts, and performing image analysis to identify locations.

## Scenario

You have been tasked by a client whose network was compromised and brought offline to investigate the incident and determine the attacker's identity.

Incident responders and digital forensic investigators are currently on the scene and have conducted a preliminary investigation. Their findings show that the attack originated from a single user account, probably, an insider. Investigate the incident, find the insider, and uncover the attack actions.

For a safe experience, consider opening this content in a secure, isolated environment.

Unzip the file with password cyberdefenders.org

Step 1 upload the Unzip file in my SOC lab and send it to Attacker Kali linux (VM)for Isolation (no internet only connection with SOC SIEM VM)

a- Upload the zip file from Cyberdefenders to my physical PC

b- Send the 73-Lespion.zip from my Physical PC to Ubuntu SOC SIEM VM

## Step 1: Configure on host

1. Shut down the VM
2. Go to **Settings** → **Shared Folders**
3. Add a folder:
  - Folder Path → choose a host directory containing your (ZIP 73-Lespion.zip)
  - Folder Name → lespion
  - ☒ Auto-mount
  - ☒ Make Permanent

## Step 2: Boot VM and mount

```
sudo mkdir -p /mnt/shared
sudo mount -t vboxsf lespion /mnt/shared
```

Now your ZIP will be available at:

```
jojo@jojo:/mnt/shared$ 73-Lespion.zip '73-Lespion Lab.docx'
```

A terminal window showing the output of the 'ls' command. The output is a multi-column list of files and directories. The 'tmp' directory is highlighted in green.

```
jojo@jojo:/$ ls
bin             home            mnt             sbin.usr-is-merged  usr
bin.usr-is-merged lib             opt             snap              var
boot            lib64           proc            srv
cdrom           lib.usr-is-merged root            swap.img
dev             lost+found      run             sys
etc            media           sbin           tmp
```

## Step 3: Fix permissions

```
sudo usermod -aG vboxsf $USER
```

check :

```
ls -l /mnt/shared/73-Lespion.zip
```

```
-rwxrwxrwx 1 root root 332 Apr 18 11:04 /mnt/shared/73-Lespion.zip
```

Breakdown:

- `rw-` → owner permissions
- `r--` → group permissions
- `last ---` → others
- `root vboxsf` → owner and group

4) Test access explicitly

```
cat /mnt/shared/73-Lespion.zip > /dev/null
```

IF

- Works → permissions OK
- Fails → still blocked

`-rwxrwxrwx` → **777 permissions**

Then **log out and back in**.

C-send 140-Oski-cyberdefenders.zip from Ubuntu SOC SIEM VM to Attacker Kali linux (VM) for Isolation and delete the 140-Oski-cyberdefenders.zip in Ubuntu SOC SIEM VM

SCP over SSH

### 1. Ensure Kali can receive SSH connections

If no ssh installed

`sudo apt update`

`sudo apt install openssh-server -y`

if ssh already installed

`sudo systemctl enable ssh`

`sudo systemctl start ssh`

Check IP:

`ip a`

192.168.100.30

### 2. From Ubuntu → transfer file to Kali

On Ubuntu desktop (where the ZIP is located):

`scp 73-Lespion.zip kali@192.168.100.30:/home/kali/`

If prompted:

password = Kali user password

### 3. Verify on Kali

`ls -l /home/kali/`

A terminal window on a Kali Linux system. The prompt is `(kali@kali) - [~]`. The user has entered `ls`. The output shows `140-Oski-cyberdefenders.zip` in green text. Below it, the word `Desktop` is shown in blue. To the right of these, there are several folder names in blue: `Documents`, `Music`, `Public`, `Videos`, `Downloads`, `Pictures`, and `Templates`.

### I move to Desktop for better visibility

`mv 73-Lespion.zip Desktop`

After extraction of the zip , I collected the Info
